

Quacked Pre-Beta Survey Results

August 2026

39

Responses

9

Universities

97%

Said it would be useful

90%

Interested in beta testing

THE PROBLEM

Top case-math pain points (n = 36)

Speed under pressure 67%

Confidence in correctness 50%

Lack of structured prep 17%

These emerged as the dominant pain points among respondents already practicing case math.

WHAT WE LEARNED

- Nearly every respondent saw value in a product like Quacked.
- Strong interest exists before launch — 90% would test an early beta.
- Customer feedback directly reinforced Quacked's planned product roadmap.
- Beta recruitment is already underway, ahead of any paid marketing.

11

Confirmed engaged testers

Known, individually identified prospective users — not anonymous survey respondents — already engaged directly with the founder ahead of launch.

KEY TAKEAWAY

Customer research provides early evidence of problem-solution fit and supports continued beta development, pricing refinement, and commercialization.

METHODOLOGY

39 consulting candidates · 9 universities · convenience sample · directional evidence, not a random-sample estimate · July 25–August 4, 2026

Distributed through the founder's university and professional networks (incl. incoming leadership in Women in Consulting and Atlas). Full methodology, limitations, and pricing-signal detail available in the companion Customer Research Validation Report.
